

Antti's Mökki

Antti had always cherished the little house in the woods that his family had owned for generations, a typical Finnish Mökki.

It held so many fond memories for him: family gatherings, holiday celebrations, and quiet retreats from the chaos of the city.

However, as he visited his grand father one day, he noticed that the old man was feeling sad.

When he asked him why, his grand father confided that he could no longer use the little house in the woods due to the fact that the old diesel power generator that provided heat and light was no longer functional.

Antti had heard about a friend of his grand father named Risto, who was selling new technologies in his shop in Helsinki. These technologies could produce power without polluting the environment, using some sort of ethanol or methanol. Without wasting any time, Antti set out on a journey to visit Risto and see if there was a solution for his grand father's problem..

After discovering a little power generator called **NESOPOWER**,
Antti loaded it onto his sledge and brought it back to the little house in the woods.

Upon connecting it, the house was once again filled with light and warmth, making both Antti and his grand father overjoyed.

From that day on, the little house in the woods held even more special memories for Antti and his family. It became a symbol of hope, resilience, and love, all thanks to the determination and love of a young Finnish boy.
